In meter application, most of the automatic metering technology uses remote metering. The RS-485 interface is always exposed to outdoors, over-voltage could happen because of lightning or some other reasons. Thus the lightning protection to RS-485 interface should be considered.

Most power suppliers are faced with misconnection of power system zero line or other man-made errors. It is necessary to have the meter power to handle periods of high-voltage without any damages. So PTC components can be used to prevent linear transformer from overheating or burning.

PLC automatic metering technology has been widely used in many countries all over the world. In general, power voltage of PLC line driver is below 12V. In order to prevent the damage from the unexpected surging voltage, TVS devices should be used between line driver and coupling transformer.
